Photo Uploader

Design and Implement a Photo Uploader application using web2py.

Basic Features that must be implemented :
- Multiple users must be able to create their accounts.
  - There should be two types of accounts.
    - Administrator account(s).
    - User account(s).
- A user must be able to login.
- A user must be able to upload photo(s).
- An option to like a photo.
- An option to comment on a photo.
  - Note that any user can like/comment on any other user's photo.
- A user must 'only' be able to delete his/her photo(s).
- An administrator has all access. i.e. an administrator can delete likes/comments/photos of any user.

Make your own assumptions in case of any ambiguity. The above features are must, you can add as many features as you can.
